PROFILE

With a background in Audio Visual and IT, I love working as part of a team to solve problems. After being exposed to developers in my IT role, I decided to move into web development so I can combine my troubleshooting skills and creativity to build interesting web applications.

PROJECTS

ODIO

My first full stack app built in Ruby on Rails. A site to help new audio engineers gain recording experience, and artists to get a free demo.
https://odioapp.herokuapp.com/

WasteNot

This was a group project, the app was built to solve the problem of food wastage in the community.
https://sharevego-app.herokuapp.com/

gigmems

A social media app, where users are matched based on past gigs they have attended and can instant message to connect.
